Log2Space OSS/BSS:
Carrier grade solution for ISP Billing and Subscriber management
Reliable and Stable Software
Continuous development and upgrades
Scalable for growing networks
24/7 Customer Support

L2S NAS:

Next Gen smart edge router.

Designed to redefine your network management experience. Bridging the gap between efficiency and ease of use, the L2S NAS stands out as a superior choice for large-scale networks.

L2S NAS key features over traditional BNG:

- Supports up to 10k users
- 1 License multiple servers
- PPPoE/IPoE Login
- Web based ISP and Operator wise login
- No need to manage multiple MikroTik routers

L2S ACS (TR-069):

Simplifying device provisioning and remote CPE management.

- Monitor devices remotely (signal strength, failures)
- Troubleshoot CPEs remotely
- Reboot routers, change SSID & passwords (from Admin and Customer Apps)
- Upgrade firmware seamlessly
- Resolve customer queries faster, no onsite visits required
- OLT & PON monitoring unified with proactive CRM alerts for smarter network management

Brand new Admin and End User Mobile

Applications (Available for iOS & Android):

- Track collections and monitor users on-the-go
- Location tagging & tracking for field engineers
- End user customers can change plans, make payments, change SSID of routers and change passwords

L2S Hotel Wi-Fi Solution:

- Up to 5 logins per room with bandwidth capping on each room
- Integrated with IDS Hotel Management System
- 1000+ concurrent users
- Bandwidth aggregation with failover support
- Secured RAID-based backup with full IPDR log management for compliance and reliability
